Kartographischen Kolloquium

Prof. Dr. Milan Konecny

President, International Cartographic Association
Masaryk University, Brno, Czech Republic

Cartography in Crisis Management - State-of-the-Art, Trends, Demands -

The crisis and disaster complex management processes massively depend on the availability and use of cartographic products. The application fields cover almost every facet of map presentation and dynamic visualization, especially in the fields of statistics, economics and many aspects of the various life sciences.

Information Society will more strongly rely on cartographic products for making decisions and plan for actions to serve every kind of (multi-)actor interest and demand in the near future.

Understanding the complex and multi-faceted use of cartographic products will enable the cartographic profession to find adequate roles especially in critical situations that are of essential societal relevance.

Vortrag und Diskussion in englischer Sprache

Ort: Technische Universität Berlin

Hauptgebäude
Raum H6131, 6.OG
Straße des 17. Juni 135, 10623 Berlin

Zeit: Dienstag, 26. Juni 2007, 17 Uhr c.t.

Gäste sind herzlich willkommen!
